

## Market Review

After rallying 7.47% over the first six months of 2021, marking five straight quarters of gains for the asset class, Emerging Market (EM) equities dropped -7.97% in the third quarter.

With low interest rates driving asset allocators towards equities and valuations growing more attractive, flows continued to move into the asset class. The overall weak performance came from several factors, including 1) Increasing regulations across Chinese corporates, 2) Growing concern around the Chinese property sector, 3) Regulation based headlines around the Korean tech space, and 4) A stronger US dollar stemming from both a flight-to-quality and views on tightening US monetary policy.

The MSCI Emerging Markets Asia Index returned -9.59% for the third quarter, lagging emerging markets outside Asia. Chinese equities were the worst performing in the region, while India and Indonesia were the best performing markets during the quarter.

This quarter, China saw a slump in returns as July and August activity indicators highlighted slowing domestic demand, though export activity held up better than expected. In particular, consumption and service activity have generally disappointed, partly reflecting the drag from local COVID-19 clusters in late July/August and subsequent tightening of mobility restrictions. In September, headline news on Evergrande raised concerns of a further slowdown in the housing market amid policy tightening, while a near-term power shortage negatively shocked the economy. Notably, China's official Manufacturing PMI fell 0.5 points to 49.6 in September, dipping below 50 for the first time since February last year. Macroeconomic policy adjustment will likely support infra-

structure and manufacturing investment, but strict decarbonization measures will cap the upside.

Indian equities saw a strong quarter with the National Stock Exchange of India rallying through August and September to an all-time high. COVID-19 cases continued to trend downward, ending the quarter at around 24,000 new cases per day. Daily vaccination rates have also significantly improved, with the number of vaccines administered as high as 7-10 million a day in the last week of September. Should the pace in vaccine roll-out continue, it would lower the risks of a severe third wave during the festival season in October and November. As lockdowns and restrictions eased, manufacturing activity quickly resumed, leading to three straight months of expansion, with Manufacturing PMI reaching 53.7 in September. Headline CPI inflation tracked below the central bank's projections; however, core inflation remained sticky in July and August. Since last quarter, mobility indicators have markedly improved, though retail and recreation were still down -12% and workplace down -24% from their respective baselines.

The South Korean equity market underwent a 3-month correction during the quarter. Despite accelerated vaccinations and improving consumer sentiment, supply bottlenecks continued to drag on real activity, particularly in manufacturing. Fears over a downturn in the memory chip supercycle and increasing government scrutiny on fintech and internet

platform companies also dampened market sentiment. Finally, the market took a hit when the Bank of Korea raised its policy rate by 25 basis points to 0.75% in August, taking a hawkish stance in a bid to curb debt growth.

In the Association of Southeast Asian Nations (ASEAN), Indonesian equities saw relatively strong performance and remains a preferred destination for global investors. The country posted US\$305 million of net foreign investor inflows in September, extending the inflows streak to a fifth consecutive month. For Vietnam, real GDP contracted -6.2% year-over-year in Q3 due to extended lockdowns to contain the spread of COVID-19. The government has since shifted its public health strategy to focus on "living with COVID-19" abandoning the prior "zero-COVID" strategy. This change of approach will allow greater flexibility in plans for businesses to reopen and for restrictions to ease.

Latin America and EEMEA (Eastern Europe, Middle East & Africa) delivered mild returns for the quarter, falling -2.36%. After rallying over 15% in Q2, Latin America fell -13.22% in the three-month period. The EEMEA region continued its strong 2021 run and added another 3.06% of positive performance in the third quarter.

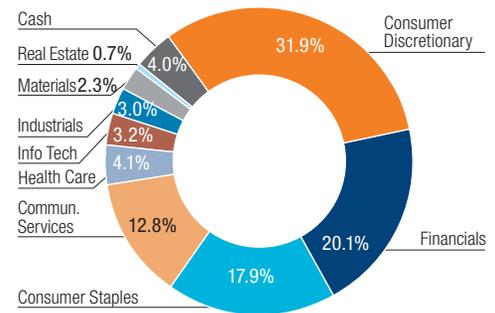

The Czech Republic, Colombia, and Russia performed the best across the region, while Brazil, Peru, and Chile lagged behind their peers. The Czech Republic rallied off improving vaccination rates, higher tourism activity across Europe, prospects for distributions from

the EU Recovery Fund, and higher interest rates lifting bank margins. Colombia benefitted from the run in energy prices and the passing of a tax bill aimed to improve the country's fiscal deficit. Russian equities also rode the tailwinds of higher oil prices and a relative lack of geopolitical noise that previously surrounded the country. Chile and Peru fell, as both countries faced political

developments that could lead to unorthodox reforms to their constitutions and economies. After a robust second quarter, Brazilian equities stalled due to a more hawkish-than-expected central bank, falling iron ore prices driven by the slowing demand out of China, and an opaque political picture going into the 2022 Presidential election.

## Fund Review

Mirae Asset's Emerging Markets Great Consumer Fund (MIGGX) underperformed its benchmark by 4.73% over the quarter ending September 30, 2021. The MSCI EM index fell -8.09% and the fund fell -12.82% during the period.

### Key Contributors to Performance

- The fund's underweight in Real Estate contributed the most to relative performance.
- The largest geographic contributions came from the fund's overweight positions and stock selection in Indonesia and Mexico.
- On the stock level, the top contributors to the Fund's relative performance during the quarter were our underweight in Alibaba along with our positions in PT Bank in Indonesia and HDFC Bank in India.

### Key Detractors from Performance

- On a sector basis, the largest detractors from relative performance were consumer discretionary and communication services due to allocation effect.

- Geographically, the Fund's overweight in South Korea and stock selection in China were the largest detractors.

- On the stock level, the biggest detractors from relative performance were Kakao Corp in South Korea, Galaxy entertainment in China, and Ping An Healthcare in China. Though carrying double digit year-to-date returns, Kakao pulled back last quarter due to a regulatory inquiry in the internet space. However, we believe that Kakao boasts a high return business model along with strong positioning in the highly fragmented Korean internet space. Though a long term winner with high operational leverage, we exited Galaxy after the Chinese government launched a wave of regulations across the Macau gaming sector.

The Fund's investment manager, Mirae Asset Global Investments (USA) LLC ("Mirae Asset USA"), has contractually agreed to forego its management fee and, if necessary, to reimburse the Fund so that total operating expenses (excluding interest expense, taxes, brokerage commissions and certain other Fund expenses) of the Fund do not exceed 1.15% (for Class I Shares) of average daily net assets through August 31, 2022. Total annual fund operating expenses for Class I shares: 1.20%. Each share class may have to repay Mirae Asset USA some of these amounts foregone or reimbursed within three years if total operating expenses fall below the expense cap described above. Past performance does not guarantee future results. The performance data quoted represent past performance and current returns may be lower or higher. Share prices and investment returns fluctuate and an investor's shares may be worth more or less than original cost upon redemption. For periods less than one year, performance is cumulative. For performance data current to the most recent month-end please call 1-888-335-3417.

## Notable Trades

### Communication Services

**Sea Ltd.—Singapore:** We initiated a position in Sea, a leading Asian internet company with the #1 market share in gaming revenues, e-commerce gross merchandise value to total orders, and e-wallet gross transaction value in Southeast Asia. Given its early mover advantage and solid management track record, we see the company as the key beneficiary of the fast-growing Southeast Asian digital economy,

### Consumer Discretionary

**Galaxy Entertainment Group—Hong Kong:** We exited our position in Galaxy following announcements on casino regulation tightening in Macau. Though the exact rules to be implemented are still under consultation, we think it's clear that overall industry dynamics and return matrix will be meaningfully impacted.

**Prosus N.V.—South Africa:** We exited Prosus, a significant shareholder of Tencent, along with various other technology companies across Emerging Markets due to a combination of increasing regulatory noise across Chinese market leaders, a view that rising interest rates would hurt the valuations of technology

names with a long runway for growth, and that we were selling from a position of strength as the company was in the midst of a US\$5 billion share buyback program.

### Consumer Staples

**Foshan Haitian Flavouring & Food—China:** We added Foshan Haitian, a manufacturer and distributor of seasoning products and the largest producer of soy sauce in China. We are positive on its earnings growth momentum relative to peers, despite slower macroeconomic growth, thanks to its leading position, strong brand franchise, and high customer loyalty. Segment upcycle and high barriers to entry will likely lead to long-term growth sustainability for the company.

## Outlook

**There are many outstanding questions across the investment landscape between Covid-19, tapering, and heightened regulation-based tension. With that said, we believe that we are reaching a sweet spot in the investment cycle, where the low-quality bounce shifts back towards profitability and quality**

Tapering is significantly less of an issue for EM than in the Taper Tantrum of 2013. The external position of emerging markets today is much stronger than in 2013 and should limit EM's vulnerability. It's also important to note that we're dealing with a much more transparent and predictable Fed than 2013.

On a regional basis, we see Latin America and EEMEA as under-owned regions, which creates a significant moment for stock-pickers assessing overlooked and inefficient markets. We continue to favor opportunities in Russia, Greece, and Mexico. We also see attractive valuations for quality companies in Brazil.

In China, we continue to favor domestic secular-driven growth stories. Still, we maintain a sense of caution as near-term uncertainty from regulatory tightening will likely persist through the remainder of the year. In the long run, regulation to promote fair competition and reduce income inequality can be beneficial for society by spurring innovation and supporting consumption, but in the short-term can impact investment. Underlying economic data is still relatively weak, as subdued property prices, floods across China, and COVID-19 have impacted consumption over the last few months. On the supply side, the power shortage remains the most significant area of concern, driven by coal shortages and the focus on carbon emission control. As such, we continue to prefer names in the sectors of

sportswear, duty-free retail, and electric vehicle, mainly due to promising structural growth and limited regulation risks.

The portfolio remains overweight in India, where we believe the country is well-positioned for economic recovery, driven by negative real interest rates, robust foreign exchange reserves, and strong pent-up demand. Moreover, limited capital investments in recent years should lay the foundation of a new investment-led economic cycle. Despite the toll of the second COVID-19 wave, the sheer construct of the Indian market meant that even as domestic cyclicals (e.g. consumer discretionary and financials) came under pressure, global cyclicals such as software services and commodities did well due to the buoyant global outlook. Consumption has been quick to bounce back, and we expect this trend to continue due to the positive wealth effect experienced in the country over the last 18 months.

In South Korea, we maintain a close watch on internet company players coming under regulatory pressure. With Korea's National Audit of State Affairs set for the first three weeks of October and political risk rising as we near the presidential elections in March, we expect regulatory risk to continue to cloud the internet sector for the near term. That said, we believe these companies have well-developed business models that will insulate from regulatory headwinds, along with opportunities to exploit the international growth angle.

Mirae Asset's Emerging Markets Great Consumer Fund focuses on identifying companies with high-quality management teams and business models that are best placed to benefit from secular growth in domestic spending across emerging markets. Our investment strategy utilizes a fundamental, bottom-up approach to invest in companies that may benefit from such enduring trends and which have shown to possess sustainable competitive advantages, including strong management, product differentiation, a dominant competitive position, pricing power, and balance sheet strength.

**Association of Southeast Asia Nations (ASEAN)** is the organization of countries in Southeast Asia set up to promote cultural, economic and political development in the region.

**Basis Points (BPS)** is a standard measure for interest rates and other percentages, representing one-one hundredth of one percent.

**Consumer Price Index (CPI)** measures the average change in prices over time that consumers pay for a basket of goods and services and is the most widely used measure of inflation.

**Manufacturing Purchasing Managers' Index (PMI)** is a measure of the prevailing direction of economic trends in manufacturing.

**MSCI Emerging Markets (EM) Asia Index** captures large and mid cap representation across 9 Emerging Markets countries in Asia.

**MSCI Emerging Markets Index** captures large and mid cap representation across 24 Emerging Market countries.

### Important information:

**An investor should consider an investment in the Funds as a long-term investment. The Funds' returns will fluctuate over long and short periods.** The Funds cannot guarantee that they will achieve their investment objective. As with all investments, there are certain risks of investing in the Funds, and you could lose money on an investment

in the Funds. Certain risks related to an investment in the Funds are summarized below:

**Equity securities (stocks)** are more volatile and carry more risk than other forms of investments, including investments in high-grade fixed income securities. The net asset value per share of this Fund will fluctuate as the value of the securities in the portfolio changes.

**Emerging market investing** may be subject to additional legal, economic, political, liquidity, and currency risks not associated with more developed countries.

**Geographic concentration risk:** A small number of companies and industries may represent a large portion of the market in a particular country or region, and these companies and industries can be sensitive to adverse social, political, economic or regulatory developments in that country or region.

**An investor should consider the Fund's investment objectives, risks, charges and expenses carefully before investing. This and other important information about the investment company can be found in the Fund's prospectus and summary prospectus. To obtain a prospectus or summary prospectus, please contact your financial advisor or please call 1-888-335-3417. Please read the prospectus carefully before investing.**
