

Emerging Markets Fund

A: MALGX C: MCLGX I: MILGX

Market Review

Emerging Markets (EM) equities fell 11.4% in the third quarter ending September 30, 2022. Most of the underperformance came from movements in the last month of the quarter, where the MSCI EM Index fell 11.7%. This marked the fifth consecutive quarter of negative returns for the asset class.

That said, EM markets looked resilient until US inflation numbers came in above expectations, leading the market to price in more interest rate hikes. The US Federal Reserve's third 75 basis point interest rate hike along with increasingly hawkish language led most markets to retreat. EM was especially impacted due to the increasing strength of the US dollar and the demand-driven sell-off in commodities. The US 10-year Treasury breached 4% before retreating back to 3.83% at the end of the month. Spiking bond yields create a particularly challenging environment for EM growth stocks as investors are forced to discount future returns with higher costs of capital. Most markets in the MSCI EM Index dropped in September. That said, our strategies provided strong resilience, outperforming the broad EM market in the third quarter.

The MSCI EM Asia Index was down 13.9% in the third quarter of 2022. By country, Indonesia and India were the leading outperformers, while China and Hong Kong were the primary underperformers. Chinese equities were down 22.4% on concerns of a slowdown from multiple fronts. While markets initially responded positively to China's macro resilience in the second quarter, recent months have been plagued by property issues, the resurgence of Covid cases, and ongoing geopolitical tensions. In July, policymakers vowed to proactively boost demand, support the platform economy, contain financial risks, and stabilize the

property market. These promises began coming through in August with the announcement of easing policy measures, including the launch of bailout funds, special loans for property developers, and rate cuts to the 1-year medium-term lending facility and loan prime rates. Signs of fine-tuning China's dynamic zero-Covid policy are also heading in the right direction, with e-visas and package tours for mainland visits to Macau announced to resume in November.

Indian equities rose 6.8% on signs of strong domestic growth. Goods and Services Tax (GST) collections remained above 1.4 trillion rupees (\$17 billion) for the seventh consecutive month in September, continuing its growth on better compliance, revival in consumption, and elevated inflation. The Indian government approved the second tranche of production-linked incentives for its solar industry as part of the "National Programme on High Efficiency in Solar PV Modules". Financial incentive schemes for semiconductor and display manufacturing have also been enhanced to boost investments in these segments. After nine months of sustained outflows, Foreign Institutional Investors became net buyers of Indian equities in July before reverting back to net sellers again in September amid broader equities risk-off sentiment. The Reserve Bank of India (RBI) raised its policy rate twice during the quarter, each time by 50 basis points to reach 5.90% in September.

Korean equities fell 16.3% amid ongoing Fed hawkishness and weakness in the Korean Won. Korean equities began the quarter strong as second-quarter results and GDP figures came in better than feared, though this was soon offset by concerns over weakening global macro conditions. The Won depreciated 7% against the US Dollar in September, bringing the year-to-date depreciation figure up to 21%. Accordingly, the Bank of Korea raised its base policy rate twice during the quarter, reaching 2.5% during its August meeting.

In Taiwan, equities fell 14.0%. Similar to Korea, Taiwanese equities saw an uptick in July, driven by resilient second-quarter earnings results in tech names. However, this was overshadowed by rising geopolitical tensions and a hawkish Fed outlook. Manufacturing PMI weakened for the 9th consecutive month in September, falling to 42.2 as concerns lingered on slowing external demand. However, August industrial production figures came in above expectations, growing 3.65% year-over-year (vs 1.63% year-over-year in July), boosted by the cycle of upcoming new smartphone launches.

The ASEAN region delivered resilient performance over the third quarter. Indonesia was the most notable outperformer, with equities rising 7.8%. Strong second-quarter earnings surprises and a bounce back in commodity prices over August were positive drivers for Indonesian equity returns, along with strong net equity inflows. While the Jakarta Com-

posite Index recorded \$209 million in net equity foreign outflows for September, year-to-date net equity inflows remain positive at \$4.8 billion. Central banks across the region raised their policy rates following the Fed's September hike, with Indonesia up 50 basis points to 4.25%, Thailand up 25 basis points to 1%, and Malaysia up 25 basis points to 2.5%.

EM countries in Latin America and EEMEA (Eastern Europe, Middle East, and Africa) both fared better than Asia. Equities in Latin America gained 3.7% in the quarter, while markets in the EEMEA region fell 5.2%. Brazil, Chile, and Peru were the best-performing equity markets in Latin America in the third quarter. Brazilian equities rallied 8.7% as the country's central bank signaled an end to interest rate increases after improving inflation data surprised the market. Investors in Brazil were also encouraged by the marginal moves to the center from both presidential candidates ahead of the October elections. Chile rallied 3.3% with an improving outlook for constitutional reforms and Peru, down just 0.9%, proved resilient with strong performance from banks and copper companies. On the negative side, Colombia stood out, falling 18.3% as sentiment deteriorated with falling energy prices.

In EEMEA, Turkey and Qatar's equity markets showed the best performance, rising 16.3% and 3.1% respectively, while Saudi Arabian equities and were flat for the quarter. Despite extremely unorthodox monetary policy and hyperinflation, Turkish equities counter-intuitively outperformed. Much of this is due to local market investors trying to protect their capital

against inflation by purchasing not only hard assets but also equities. Markets in Qatar and Saudi Arabia showed resilience despite falling energy prices due to three reasons: (1) their currency pegs to the US Dollar, (2) higher interest rates helping margins in their banking sector, and (3) increasing economic activity ahead of the much anticipated World Cup in November. On the negative side, we saw Poland, the Czech Republic, and Hungary's equity markets decline 24.6%, 18.2%, and 15.0%, respectively, as inflation spiked, global growth expectations fell, and the situation in Ukraine deteriorated.

Fund Review

Mirae Asset's Emerging Markets Fund (MILGX) outperformed its benchmark by 2.30% in the quarter ending September 30, 2022. The MSCI Emerging Markets Index fell 11.57%, while the Fund declined 9.27% during the period.

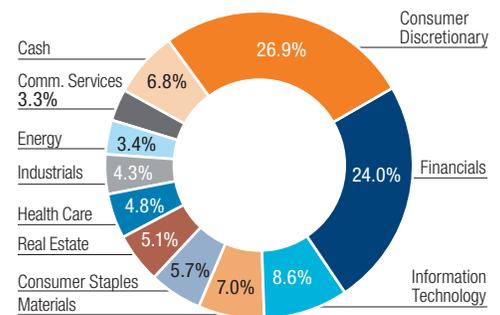

Key Contributors to Performance

- On a country basis, the largest contributor to Fund performance came from our stock selection and overweight to India. Our underweight to China relative to the benchmark also had a positive impact on performance.
- From a sector perspective, Consumer Discretionary contributed the most to Fund performance due to stock selection. Stock selection and an underweight allocation to Information Technology also added to performance.
- On a stock level, the top contributors to the Fund's relative performance were Indian companies ICICI Bank, Lemon Tree Hotels, and Mahindra & Mahindra.

The Fund's investment manager, Mirae Asset Global Investments (USA) LLC ("Mirae Asset USA"), has contractually agreed to forego its management fee and, if necessary, to reimburse the Fund so that total operating expenses (excluding interest expense, taxes, brokerage commissions and certain other Fund expenses) of the Fund do not exceed 1.15% (for Class I Shares) of average daily net assets through August 31, 2023. Total annual fund operating expenses for Class I shares: 1.52%. Each share class may have to repay Mirae Asset USA some of these amounts foregone or reimbursed within three years if total operating expenses fall below the expense cap described above. Past performance does not guarantee future results. The performance data quoted represent past performance and current returns may be lower or higher. Share prices and investment returns fluctuate and an investor's shares may be worth more or less than original cost upon redemption. For periods less than one year, performance is cumulative. For performance data current to the most recent month-end please call 1-888-335-3417.

There is no assurance that the securities mentioned remain in the Fund's portfolio or that securities sold have not been repurchased.

Key Detractors from Performance

- Geographically, the largest detractors of relative performance came from the Fund's allocation to off-benchmark countries, United Kingdom and Vietnam. However, it is instructive to keep in mind that the portfolio's country weightings are a function of bottom-up stock selection rather than targeted allocations to particular countries.
- From a sector perspective, stock selection and allocation effects in Consumer Staples and Energy detracted the most from relative performance.
- On the stock level, the main detractors to the Fund's relative performance in the quarter came from Chinese companies LONGi Green Energy Technology and Ganfeng Lithium.

Notable Trades

Consumer Discretionary

Lojas Renner—Brazil: Though we continue to like Lojas Renner as a business, valuations went above our price targets and we grew concerned about (1) difficult year-over-year comps as Brazilians spent at a record pace coming out of Covid, and (2) a build-up in the company's financials business (not their core competency).

Mr. Price—South Africa: We exited our long-term position in Mr. Price as we grew conscious of recent capital allocation decisions into non-core businesses along with the potential slowdown in discretionary spending across South Africa.

Sands China—Hong Kong: Sands China is the largest gaming operator in Macau in terms of number of hotel rooms and employees. The company

owns and operates five properties in Macau. The reinstatement of e-visas and package tours to Macau from mainland tourists is expected to drive a mass revenue uptick in Macau's gaming market, with Sands well placed to benefit due to its large capacity compared to peers.

Real Estate

Swire Pacific—Hong Kong: We added Swire Pacific as the company has a diversified portfolio of property, aviation, beverages, and other businesses. Following the easing of inbound quarantine rules for Hong Kong, we expect airline Cathay Pacific to see a gradual recovery, with results to also flow through to Swire. Underperformance in the property business has also narrowed, and we expect to see a healthy pick up in office leasing demand once borders re-open.

Outlook

Looking into the last quarter of 2022, there are three key areas that we believe will likely impact performance in emerging markets:

1. Interest Rates and the US Dollar:

The US Federal Reserve has now made three sequential 75 basis point interest rate hikes. US economic data has kept Fed commentary hawkish, but we are starting to see signs of demand destruction which will eventually bring inflation down to levels where the Fed can signal an end to its hiking cycle. We believe that this will be a key catalyst for EM equities for the following reasons:

- a. Lower interest rates could imply a weaker US dollar, which translates into smaller balance sheets across EM.
- b. Lower interest rates can decrease net interest expenses for companies across EM.

c. Lower interest rates allow analysts to lower the cost of capital in their models, which has a significant impact on high duration names, such as structural stories in EM, which are based on promises of high growth and maturation over a multi-year period.

2. China: The 20th CCP meeting outlined a blueprint for China's economic and social development over the next 5 years. On the positive side, President Xi focused on stability, middle class growth, strengthening consumption, market support, and technology & innovation. On the negative side, Xi's speech did little to quell concerns about an adversarial relationship between China and the West. In addition, we did not see a signal to the end of Covid-19 lockdowns. However, the latter remains a key catalyst looking into the end of the year and 2023. We believe that the government will push forward with a sustainable reopening as the

elderly population reaches an 80% vaccination rate and as new, more effective vaccines hit the market.

3. Eastern Europe: The Ukraine/Russia situation has destroyed supply chains and provided a boost to commodity-producing countries and traditional value-oriented sectors. On the other hand, we believe countries sensitive to the geopolitical risk premium, like Turkey, Greece, Egypt, and Poland, are poised for a strong rebound if we see any sort of ceasefire or peace agreement.

We remain underweight in China but have increased our allocation to Consumer Discretionary names that we believe are set to benefit from a reopening. The reopening of Macau to mainland tourists is a positive sign that the relaxation of China's dynamic zero-Covid policy is heading in the right direction,

and further fine-tuning of policies could come into effect after the National Party Congress (NPC). In the lead-up to the NPC, we've also witnessed a ramp-up in policy efforts to support the economy, suggesting that a new policy cycle could already be underway. We believe that once the political landscape is settled, policymakers will likely refocus on growth and economic development as a priority for 2023.

Despite the resilience of its domestic economy, we've reduced our weighting in India over the past month given the uncertainties in the global macro environment. We still believe India's three to five-year structural growth story presents attractive long-term opportunities. However, we expect some volatility in the near term as the RBI tightens to support its currency. India's foreign exchange reserves ended September at around \$533 billion, down more than \$100 billion from the same time last year. Thus, we will likely maintain a more defensive position in India over the next six months as we carefully monitor the country's reserve depletion. We've also taken profits and trimmed holdings in Industrials and Consumer Discretionary names that have done well, while adding to Staples and Information Technology names that should benefit from the Rupee depreciation.

Within ASEAN, Vietnamese equities have held on well this year but weren't immune to the risk-off sentiment across equities in September. However, we remain confident in our holdings in leading jewelry retail and banking names, both of which are well-positioned in their respective growing domestic markets.

We see opportunities in Latin America and EEMEA as under-owned regions, which creates a significant moment for stock pickers assessing overlooked and inefficient regions. We see particularly attractive opportunities in Greece, Saudi Arabia, and in overlooked domestic cyclical names in Brazil.

Overall, we continue to hold our core positions and look to add exposure to high-conviction names on dips. Following the recent price corrections, we believe now is more of a buying zone than a selling zone. We expect stocks to continue to bounce around current levels before confidence in fundamentals returns, and companies that have demonstrated resilience should outperform.

Mirae Asset's Emerging Markets Fund continues to focus on predictable and enduring investment drivers, such as domestic structural stories, proven business models, and strong management teams. Our Emerging Markets investment strategy continues to be driven by fundamental, bottom-up stock selection. We look to invest in high-quality companies with structural advantages that should benefit from broad growth across emerging markets. We maintain the view that over the long run, share prices reflect company earnings and we aim to take advantage of market dislocations.
